

Property X – Performance Summary (July to December 2023)

What the Dashboard Shows:

1. Occupancy (How full the hotel is):

Hotel is filled with 57% of rooms on an average, which is lower than most competitors. We are ranked 5th out of 6 hotels. Gradual decline from July to November, minor recovery in December. Significantly lower than the competition set throughout the period

2. ADR (Average Daily Rate – Room Price):

We charged around \$190 per room, which is competitive and sometimes higher than others. Ranked 4th out of 6. Mostly stable across months, slight increase in October.

3. RevPAR (Revenue per Available Room):

We made about \$111 per available room, which is ok, but not as strong because of lower occupancy. Ranked 4th out of 6. Mirrors occupancy trend – lower in months where occupancy drops. Underperforms due to weaker occupancy despite moderate ADR.

4. Indexes (How we compare to market):

- RGI (Revenue Index): 103% – We are making slightly more money than the market average.
- ARI (Rate Index): 107% – Our room rates are stronger than the market average.
- MPI (Market Penetration): 85% – We are getting less guests than our competitors.

What We're Doing Well:

- Room prices are strong – We are charging competitively and not undercutting
- Despite occupancy weakness, RGI >100 shows hotel generates more RevPAR than competitors on average.
- Revenue strategy is okay but need support to enhance the occupancy currently the average occupancy is 57%

What needs attention or recommendation:

- **Occupancy Lags Behind:** MPI of 85% and 5th rank in OCC is a major issue.
- **Demand Capture:** Missing out on potential demand, especially in peak months.
- Need better marketing or offers to pull in more bookings, especially in lean months.

Weekday vs. Weekend Performance Summary (Jul–Dec 2023)

Weekday Performance:

1. **Occupancy (Room fill rate):**
We had 55% occupancy on weekdays, but the comp set averaged 70% — we're 15% behind, which is a concern.
2. **Room Rates (ADR):**
We charged \$186, slightly higher than competitors at \$179 — good pricing power.
3. **Revenue per Room (RevPAR):**
Our RevPAR was \$103, while competitors made \$126 — we're losing revenue mainly due to fewer bookings, not pricing.

We are pricing fairly on weekdays but not attracting enough guests. Potential guests might be choosing competitors due to better visibility, offers, or loyalty programs.

Weekend Performance:

1. **Occupancy:** Our hotel was at 63% occupancy, slightly better than comp set's 62% — this is a strength.
2. **ADR:** Our weekend price was \$201, significantly higher than comp set's \$177.
3. **RevPAR:** We made \$129 per room, while competitors made \$109 — we outperformed.

Key Trends & Insights:

- Weekdays are underperforming — lower bookings causing revenue drop.
- Weekends are our strong point — we're attracting guests and earning more than competitors.
- We've improved occupancy in Nov & Dec, possibly due to festive demand or improved strategies.

Recommendations for Improvement:

1. **Boost Weekday Occupancy:**
 - Offer corporate packages or tie-ups with local offices.
 - Promote extended stay deals (Sun–Thurs) at discounted bundles.
 - Improve online visibility and SEO targeting business travellers.
2. **Sustain & Maximize Weekend Strength:**
 - Continue dynamic pricing for weekends.
 - Offer event-based promotions or couple getaway packages
